AI Assisted Coding 14.2

Lab Experiment: Web Design Application – AI-Assisted HTML/CSS/JS Generation

Course Code: 23CS002PC304
Course Title: AI Assisted Coding
Year/Sem: III / II (R23)

Batch: 34
Student Name: seetharam
Roll No: 2303A52440

Date and Day of Assignment: Week 7 – Tuesday

Lab Objectives

- Design functional web applications using HTML, CSS and JavaScript with AI assistance.
- Apply responsive and interactive UI design principles.
- Create real-world UI components for web applications.

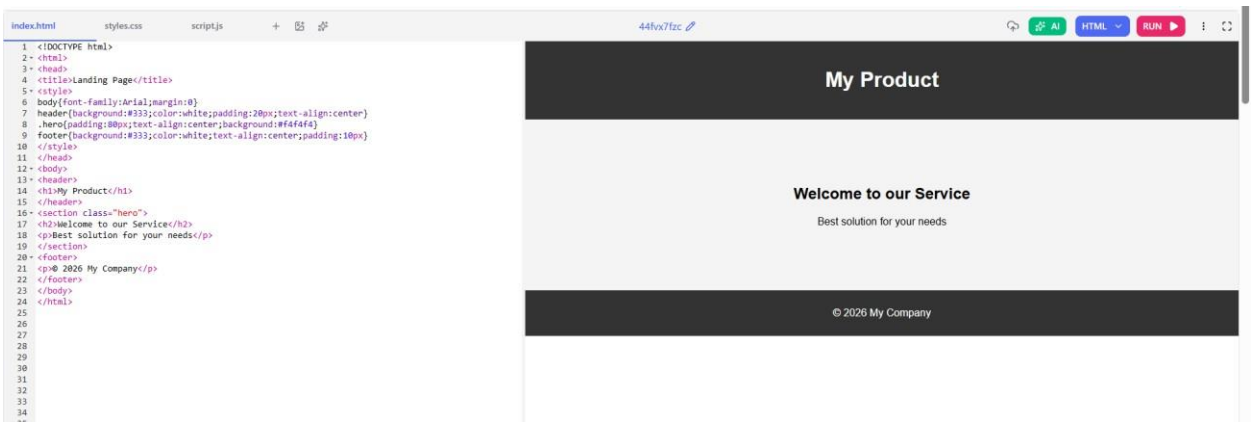
Task 1 – Landing Page Design

Code

```
<!DOCTYPE html>
<html>
<head>
<title>Landing Page</title>
<style>
body{font-family:Arial;margin:0}
header{background:#333;color:white;padding:20px;text-align:center}
.hero{padding:80px;text-align:center;background:#f4f4f4}
footer{background:#333;color:white;text-align:center;padding:10px}
</style>
</head>
<body>
<header>
<h1>My Product</h1>
</header>
<section class="hero">
```

```
<h2>Welcome to our Service</h2>
<p>Best solution for your needs</p>
</section>
<footer>
<p>© 2026 My Company</p>
</footer>
</body>
</html>
```

Paste - Landing page output in browser

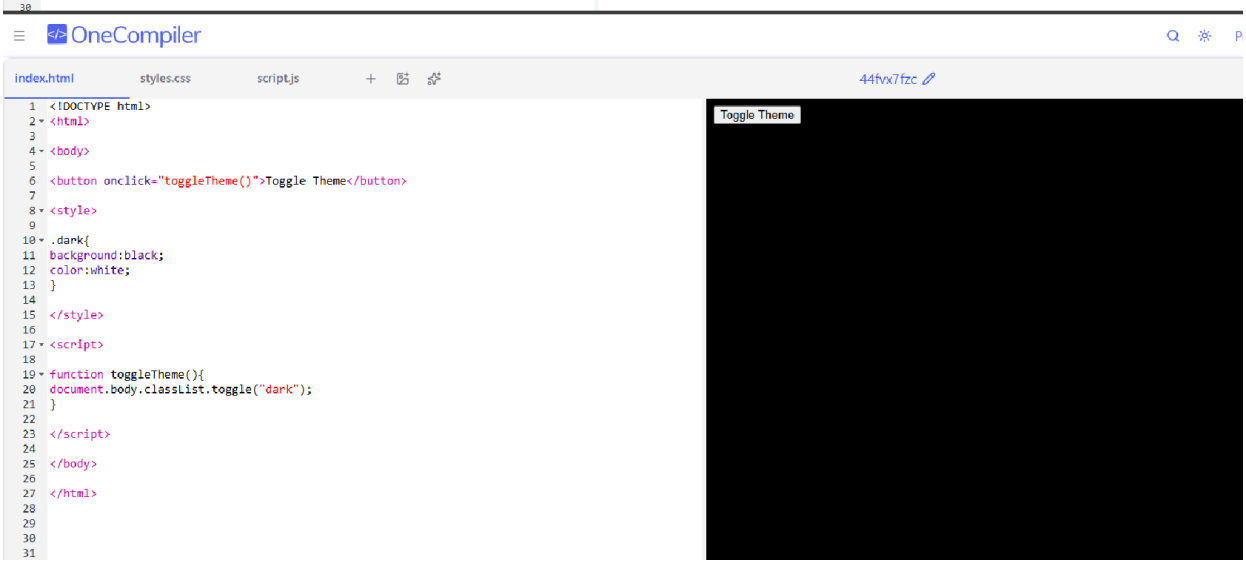


Task 2 - Theme Toggle Feature

Code

```
<button onclick="toggleTheme()">Toggle Theme</button>
<style>
.dark{background:black;color:white}
</style>
<script>
function toggleTheme(){
document.body.classList.toggle("dark");
}
</script>
```

Screenshot Here - Light mode and dark mode toggle output

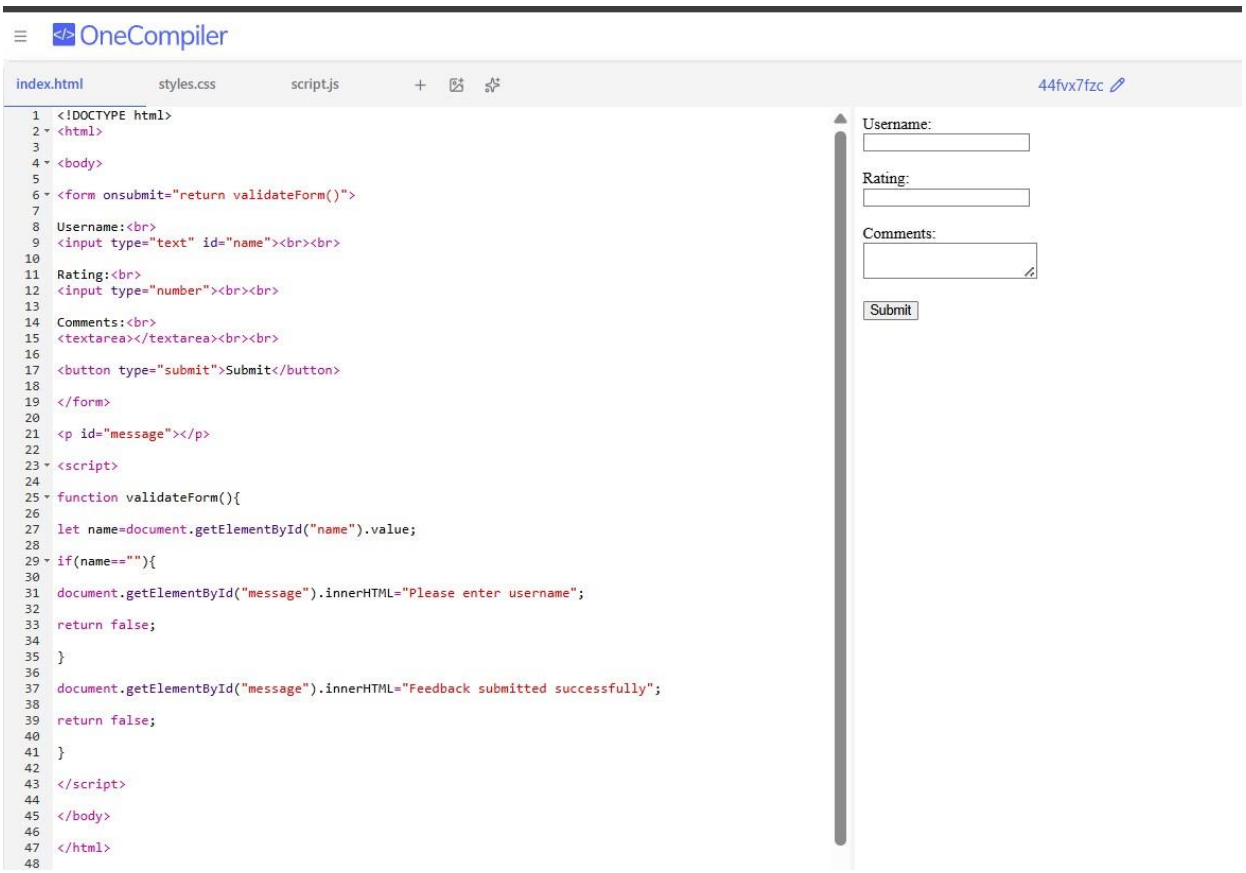


Task 3 - User Feedback Form

Code

```
<form onsubmit="return validateForm()">
Username:<br>
<input type="text" id="name"><br><br>
Rating:<br>
<input type="number" id="rating"><br><br>
Comments:<br>
<textarea id="comment"></textarea><br><br>
<button type="submit">Submit</button>
</form>
<p id="message"></p>
<script>
function validateForm(){
```

```
let name=document.getElementById("name").value;
if(name==""){
document.getElementById("message").innerHTML="Please enter username";
return false;
}
document.getElementById("message").innerHTML="Feedback submitted
successfully";
return false;
}
</script>
```

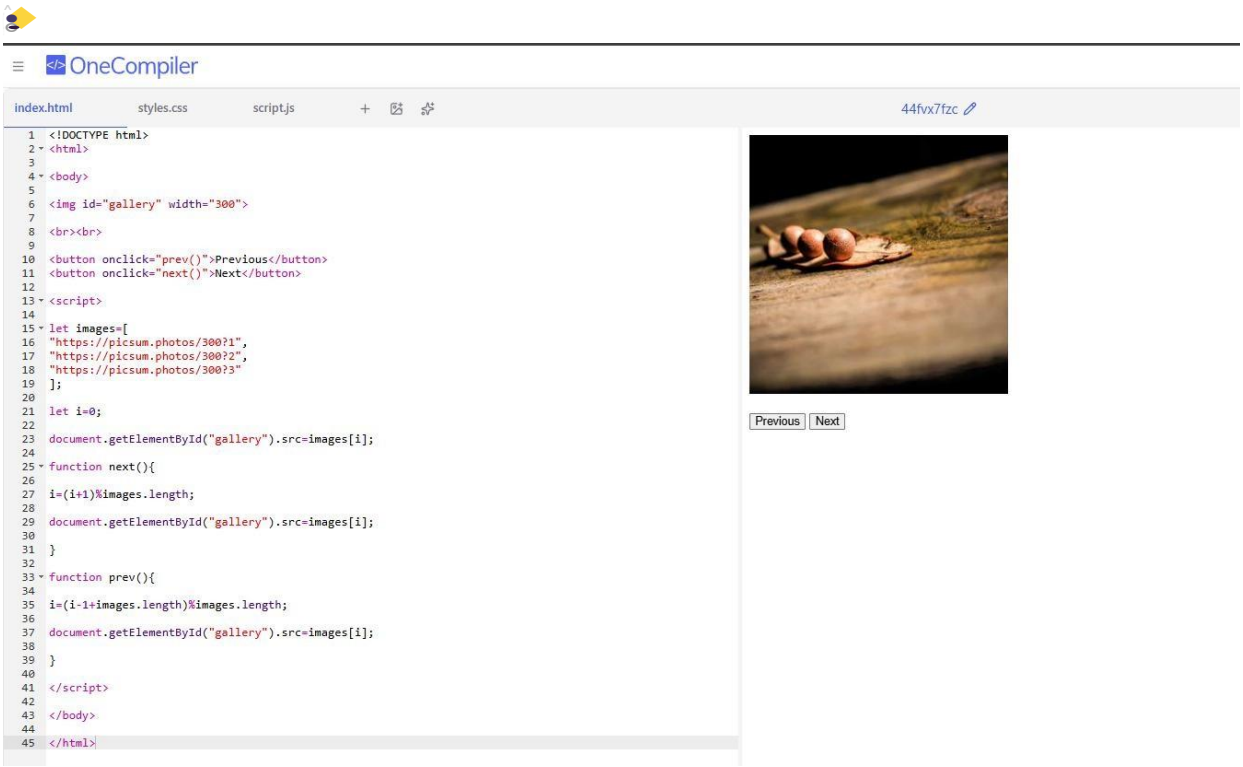


Task 4 – Image Gallery with JavaScript

Code

```
<img id="gallery" width="300">
<br><br>
<button onclick="prev()">Previous</button>
<button onclick="next()">Next</button>
```

```
<script>
let images=[
"https://picsum.photos/300?1",
"https://picsum.photos/300?2",
"https://picsum.photos/300?3"
];
let i=0;
document.getElementById("gallery").src=images[i];
function next(){
i=(i+1)%images.length;
document.getElementById("gallery").src=images[i];
}
function prev(){
i=(i-1+images.length)%images.length;
document.getElementById("gallery").src=images[i];
}
</script>
```

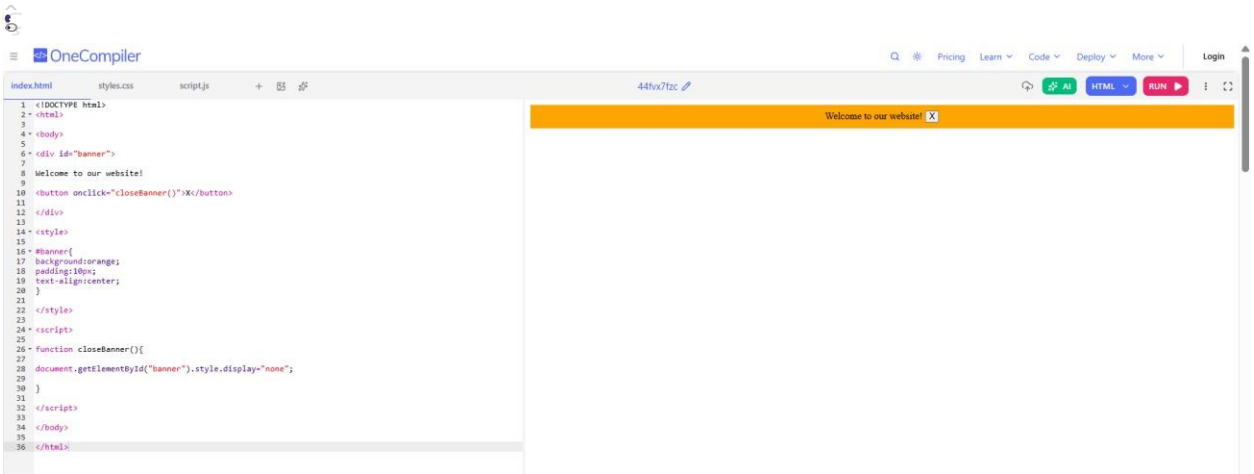


Task 5 – Notification Banner

Code

```
<div id="banner">
Welcome to our website!
```

```
<button onclick="closeBanner()">X</button>
</div>
<style>
#banner{background:orange;padding:10px;text-align:center}
</style>
<script>
function closeBanner(){
document.getElementById("banner").style.display="none";
}
</script>
```



Conclusion

AI tools help generate HTML, CSS and JavaScript quickly while improving UI design, responsiveness and usability.
